Subject Mushroom Express Progress/Update

I am in receipt of the latest draft of the site Sampling and Analysis Plan (SAP) dated April 30, 2008. You are approved to implement this plan with the minor modifications presented by Mike Schwennesen in correspondence with Marc Boogay. In an e-mail correspondence, submit to me the field schedule and estimated date of receipt of the analytical data and results report. Failure to implement this plan in a timely manner will cause the current "voluntary cleanup with U.S. EPA oversight" to transition to a U.S. EPA enforcement action.

Also submit a written narrative of the plan for moving forward with priority site tasks discussed during our 2/28/08 site meeting and any changes in site conditions since that time. These include:

- Hazardous materials segregation, profiling and transportation/disposal at an approved facility. All documentation associated with this effort must be forwarded to me at the address below including any wastes which may have been transported off-site between 2/28/08 and the present.
- Site security and tenant control.
- Management of physical hazards, including partially collapsed walls.

SAP implementation is a critical first step in determining what, if any, additional response steps may be necessary. The tasks listed above are independent of SAP results and must be addressed on a time critical basis.

Craig Benson, Federal On-Scene Coordinator
